Hello.

At Wynne Walker Group we believe it's about the experience, not the technology.

We focus solely on the design, planning, budgeting, and execution of your smart home, leaving the sale and installation of equipment to the professionals we help you choose.

Our fixed fee pricing keeps our recommendations objective and aligns our incentives with yours, ensuring systems are properly installed, easy-to-use, and simple in nature.

Why Choose Wynne Walker Group?

The best experience and the most value, for the least expense.

You hire an architect to design a beautiful house and a structural engineer to ensure structural integrity. Why wouldn't you hire a technology expert to oversee one of the most sophisticated systems in your home?

We develop a clear plan and objective recommendations to mitigate costly mistakes. We're able to remain objective because we don't sell or install the hardware; we're technology agnostic.

We provide competitive bidding and "apples to apples" price comparisons, we take into consideration factors that can result in unexpected costs and outcomes, to make your decisions simpler at every step.

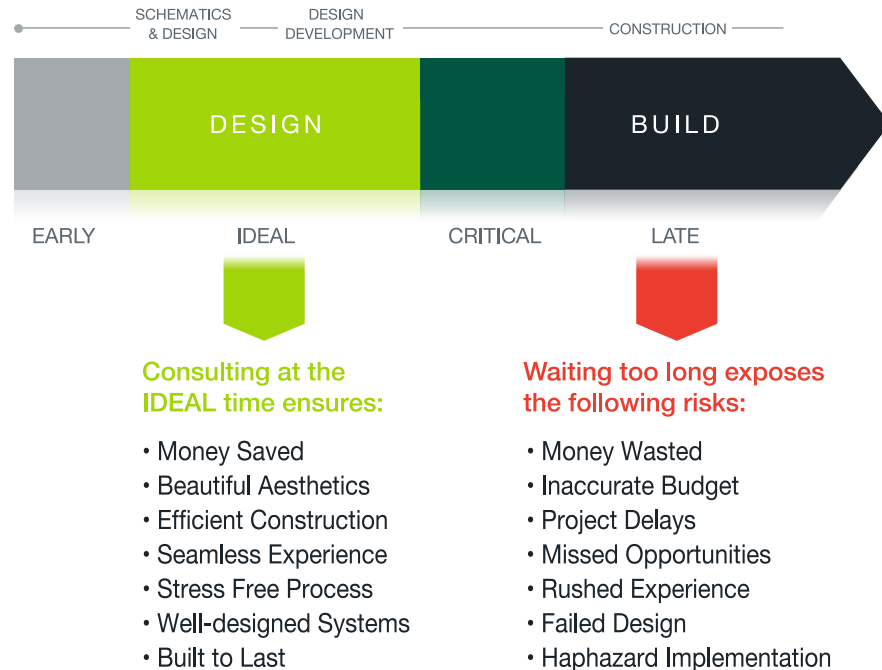

We support the architect, builder, interior designer, and technology installer throughout the construction process providing a single point of contact and maintaining consistency throughout the process.

We are a second set of eyes on your project, ensuring your needs are met and money is spent on the right things at the right time. In short, we manage your project from start to finish.

Quality and Value Begin with Expertise.

A lack of industry standards means there are significant differences between home technology installers. We have the expertise to save you time, money, and frustration down the road. We work with you to define your expectations at the beginning of the project, applying our expertise to each decision and how it impacts you and your family. We make an unpredictable cost and outcome predictable.

When to bring us into your home construction project.

Design. Build. Enjoy.

We design technology solutions, find the right integrator, and manage their work to create an optimal technology experience for you.

As simple as 1, 2, 3...

1

Design & budgeting

We begin the design phase with a kick-off meeting, where we facilitate real-world discussions about how technology will be used. We create a scope of work, specifications, floor plans, elevations and a range of system costs.

2

Installer selection & validation

Once the scope and budget are established, we interview, vet, and recommend the best installers to bring the design to life. As former integrators we know how to identify and work with the best installers.

3

Construction administration & milestones

We expertly manage the implementation to ensure the end result matches the design. We're in lockstep with the installation team throughout the project, designing and validating changes to the scope, facilitating milestone achievements and payments, and providing a second set of eyes on the project. When you move in, we're there to provide training until you're comfortable with the system.
